

Siddant Vardey

Software Engineer

Software Engineer with 5+ years of experience building scalable applications and LLM-powered systems, with a focus on Generative AI, agent-based workflows, and evaluation pipelines. Hands-on experience in RLHF, prompt engineering, and AI automation, with growing expertise in RAG pipelines, semantic search, and Python-based ML systems. Strong background in backend development, system design, and CI/CD, with the ability to rapidly prototype and productionize AI solutions.

Academic Details

National Institute of Technology, BHOPAL (2016-2020)

Bachelor of Technology (B.Tech.)

Technical Skills

GenAI / LLM Systems

- RAG Pipelines, Semantic Search
- Agentic AI Workflows (multi-step reasoning, tool usage)
- Prompt Engineering & LLM Evaluation (RLHF)
- LLM APIs & orchestration

AI / ML Stack

- Python (NumPy, Pandas – working proficiency)
- Hugging Face Transformers (exposure)
- Model evaluation, dataset curation

Frameworks & Tools

- LangChain (conceptual + applied exposure)
- Vector DBs (FAISS / Pinecone – conceptual/practical exposure)
- REST APIs, AI integration pipelines

Backend & Systems

- Node.js, TypeScript
- Microservices architecture (AWS)
- System design, API orchestration

DevOps / Engineering

- Git, CI/CD pipelines
- Docker (basic exposure)
- Agile development

Work Experience

Software Engineer II – Consultant

People Prime Worldwide (Client: Turing), July 2025 – Present

Meta – Code Physics Simulation (RLHF) Project

- Performed **Reinforcement Learning from Human Feedback (RLHF)** evaluations to improve LLM responses related to **2D/3D physics simulation instructions**..
- Designed structured evaluation frameworks to improve **accuracy, reasoning quality, and instruction adherence** of AI-generated code and simulations.
- Provided high-quality correction signals to improve model performance across simulation tasks.

Amazon – Agentic AI Project

- Designed **agent instructions, API-call workflows, and response templates** for LLM-based automation of HR and finance operations..
- Led a **team of 4–6 reviewers**, ensuring output quality and consistency in AI model training data.

Software Developer Engineer - II

Spacejoy, BENGALURU February 2023 – April 2025

- Engineered high-performance, interactive 3D applications with Three.js, increasing user engagement by 25% and session duration by 20% across key projects.
- Collaborated with cross-functional teams, reducing design-to-development time by 30% through seamless coordination with designers and backend developers, resulting in quicker product launches.
- Optimized web applications for speed, reducing average page load time by 40% and improving mobile responsiveness, leading to a 20% increase in mobile traffic and 15% better Core Web Vitals scores.

Software Developer Engineer - II

Kreditbee, BENGALURU August 2022 – January 2023

- Resolved **50+ web and mobile issues**, improving user experience, increasing operational efficiency by 20%, and reducing customer support tickets by 15%.
- Implemented **CMS enhancements and cross-team fixes** that boosted blog engagement by 25%, improved content workflows by 30%, and maintained **99.9% platform uptime**.

Software Developer Engineer - I

Spacejoy, BENGALURU July 2020 – July 2022

- Re-engineered website processes and page communication flows, reducing user drop-offs by 30%.
- Built missing **SEO pages**, improving search rankings by 45%.

GenAI Projects

Project Name	Description	Technologies	Key Contributions	Impact / Outcome
LLM Evaluation & RLHF Pipeline	Designed evaluation workflows to improve LLM reasoning and instruction-following in physics simulation tasks	Python, RLHF, Prompt Engineering, Evaluation Frameworks	Built structured evaluation metrics, improved feedback loops, optimized annotation workflows	Improved model accuracy, reasoning quality, and reduced inconsistencies
Agentic AI Automation System	Developed LLM-driven multi-agent workflows for automating HR and finance operations	LLM APIs, Agentic Workflows, Prompt Engineering, API Integration	Designed tool-usage pipelines, structured prompts, and execution flows; led review team	Reduced manual effort and improved automation efficiency
RAG-Based Document QA System	Built a retrieval-augmented generation system for answering queries over documents	Python, LangChain, FAISS/Pinecone, OpenAI/HF, Embeddings	Implemented document chunking, embedding pipelines, semantic retrieval, and response generation	Enabled context-aware answers and reduced hallucination
AI Workflow Optimization System	Improved LLM evaluation and training pipelines for scalability and efficiency	Python, Data Pipelines, CI/CD, AI Tooling	Streamlined evaluation processes, reduced redundancy, improved data quality pipelines	Reduced rework and increased throughput of AI training workflows
